

QuickBooks Integration

Smart Service

1 Adding Smart Service to QuickBooks gives you scheduling and dispatching capabilities.

2 Schedule a job in Smart Service for one of your technicians and...

3 ...that job will be sent to their mobile device. The tech can read the details, review customer/equipment information, and add line items to the work order as needed.

5 The tech's completed paperwork will be received by Smart Service, where it can be posted to QuickBooks and become part of your company's service history.

4 Once the job is done, the tech can collect a signature and file all their paperwork by syncing their device. After that, they're off to the next job!

Smart Service and iFleet QuickBooks workflow
